Growers
Since
1947

- Exclusive FeED iron chelate system
- Higher Boron
- Potential acidic fertilizer to prevent pH rise in the growing medium
- Additional magnesium for improved greening.
- Greater than 65% nitrate nitrogen.
- Higher nitrogen content means you use less.

Size Available: 25lb. Bag

Designed specifically for pansy production in late summer and early fall. A nitrate / ammonium nitrogen system is more efficient in warmer weather than the traditional high nitrate pansy fertilizer. The result is a potentially acidic product that will lower media pH over time.

Jack's Professional Fall Pansy FeED also contains J.R. Peters exclusive FeED iron chelate system plus additional magnesium and boron which is necessary to produce a consistent, high quality crop. At 17% nitrogen content you also use less product to achieve your desired feeding rates than the traditional 15% products.
